RE: Change-over from Space Dyed to Solution Dyed Nylon.

Dear Valued Customers,

In line with our strategic objectives of continuously reducing our carbon footprint and improving our environmental status, Van Dyck Floors are in the process of converting some of our wet dyed products into SDN (Solution Dyed Nylon).

This transition process requires the matching firstly of popular existing ranges and colours and the development of a bank of Solution Dyed Nylon colours that will suit the current flooring trends. We are already well into this process and have therefore decided to discontinue some of our existing wet processed colours.

The following ranges will be affected by this transition: -

Diplomat
Stately Homes
Sorrento
Nylon Commercial Tufted Tile Ranges.

We therefore ask for your patience during this transition and request that you check stocks on these ranges before committing to orders? We are planning to have this process completed over the next 2 months and will announce these new ranges as they become available.

Manhattan has already been upgraded to Manhattan Plus utilising PFX BCF Polypropylene yarn.

We thank you for your very valued support.

Kind Regards

Eric Ward
